## HELP NEEDED: Raw SCYTL (Secretary of State) runoff data from Data Integrity Group -- LET'S FIND THE STEAL

992

1 months ago by [TrumpSteaks](#) +992 / -0

Here is the gofile link to the raw data, and the dekalb county raw precinct data:

<https://gofile.io/d/Fb2UPA>

Here are some examples of vote drops: <https://imgur.com/a/481qIEX>

KEEP IN MIND -- although those vote drops for one or two votes, we shouldn't be seeing ANY vote drops. There might be other things in the data, so check out what you can. I'll be updating this post with other data drops.

Post in here if you have any questions, data needs, or findings. We're running a bunch of other analyses, but I'll be monitoring this thread for anything you guys need.

Our group is in D.C. with access to senators and congressmen (talked to a few congressmen last night and ted cruz's team). If we find something, we'll walk it over to the white house (we're in a hotel like 1 block away).

Let's see what our pedes can help us find -- go forth and uncover the steal young man.

Might include timeline of events to compare raw data charts

Eg. When it was announced Fulton was closing When they disallowed observers When they found votes When 2 networks showed votes subtracting When they found more votes

Definitely -- I'm working on a sort of deeper analysis. Can anyone work on getting those aligned to the timestamps? The timestamps are in EST in the files btw.

Which Scytl servers are these?

6

So these servers are in the US right?

[permalink](#) [parent](#) [save](#) [report](#) [block](#) [reply](#)

No one really knows where the servers are -- I believe they're in Tampa, FL. It's kind of neither here nor there. Let's focus on looking at the raw data.

I'm just trying to differentiate this data from the supposed "Scytl server raid".

2 Are lines 352-353 or lines 544-555 lines 928-930 and 1120-1122 first document what we are looking for? I want to help you but I am not sure what it is I'm trying to find? all the integers in the highlighted columns are identical in these lines first column 22,21, 23 second 21,19,22 Also how can I document anything if I can figure out what I'm looking for?

1 Awesome thanks. Please show them this video I made using data I found on this site back in early November. It makes the data-driven case in very simple terms anyone can understand and no-one can deny. <https://rumble.com/vb2xn1-evidence-of-trump-votes-switched-to-biden-a-high-level-walkthrough.html>

1 Here's my problem. I always look for the simple answer. I can't imagine a mathematical world where totals go down as percentages shift.

Say for example 50 frogs aye and 50 frogs nay

100 votes total 50 %share each

100 votes for nay come in. 200 votes total 25% percent aye 75% nay.

You can keep adding votes and the percentage will drop but how do you lose votes?

1 I know, sorry. Not dissing all the work. I've also been crunching where I can, but if you can't get people to accept simple proof, how are you ever going to convince of more conclusive but technical data
